

Building an Open-Source Archive for Born-Digital Dissertations

Data Management Plan

Description

The following outlines the data management plan for the proposed workshop: *Building an Open-Source Archive for Born-Digital Dissertations*. The work product for this project will be derived from the brainstorming and planning sessions held at the workshop rather than traditional research data-sets.

Content and Format

Data Type	Summary/Description	Format	Management and Storage
Workshop documentation	Documentation of all brainstorming and planning sessions that occur at the workshop.	Wiki	Wiki will be installed and maintained on the eServer (publicly accessible networked server) on the Iowa State University campus.
Workshop website	Information pertaining to the workshop and it's purpose including a workshop twitter feed.	HTML/Website	Website will be developed and maintained on the eServer (publicly accessible networked server) on the Iowa State University campus. The workshop Twitter feed will be archived using Twapperkeeper on the same server.
Project whitepaper	Summary and analysis of the workshop events and product. Preliminary requirements and planning for the development of the archive.	MS Word/PDF	Whitepaper will be posted to the workshop website and will be available to the public.

Protection & IP

The workshop will not produce any data that will require privacy protection or confidentiality.

The intellectual property developed during the workshop will be owned jointly by Iowa State University and Michigan State University.

Access

All workshop documentation and project planning documents will be made available on the workshop website. The information will be available in standard text formats (e.g., XHTML, MS Word, PDF, etc) and, therefore, should be easily accessible to other researchers.
